Team 49 AI Report

AI Usage Scale: 4

Models Used

ChatGPT 6.1 Sol

Description

AI was used to entirely generate the more difficult pieces of code, such as camera and audio analysis. However, there was frequent human input into how this should be done and what corrections needed to be made to these systems for them to work properly. No one prompt was responsible for any large portion of the system.

Tetris was made by hand in Java, then converted to JavaScript with AI to become functional in the site. The interfacing with the camera controls was largely done by hand.
